1. Using web resources, look up the DNS protocol. You may find the following website to be of help: www.freesoft.org/CIE/Topics/75.htm.

2. Look up these facts: Who invented the DNS protocol? What is its purpose? How is it used?
   Paul Mockapetris invented the DNS protocol. The purpose was to turn domain names into IP addresses. This allows users to use words to find the website they want instead of remembering the IP address.

3. Using web resources, look up the TCP/IP protocol. Look up these facts: Who invented the TCP/IP protocol? What is its purpose? How is it used?
   TCP/IP protocol was invented by Vint Cerf and Bob Kahn. They are a set of communication protocols that are used by the internet to reliably transmit and routing traffic from one end to the other.

4. Using web resources, look up the Network Protocols, and write a brief description about each on.
   a. File Transfer Protocol (FTP) – This is used to transfer files from one device to another over an unencrypted TCP/IP connection.
   b. Hypertext Transfer Protocol (HTTP) – enable systems to communicate on the World Wide Web.
   c. Hypertext Transfer Protocol Secure (HTTPS) – enables systems to communicate on the World Wide Web with SSL/TLS encryption
   d. Internet Message Access Protocol (IMAP) – a protocol that is used to get emails, allows emails to be viewed on different devices
   e. Simple Mail Transfer Protocol (SMTP) – a protocol that sends emails with a TCP connection
   f. Simple Mail Transfer Protocol Secure (SMTPS) – a protocol that sends emails with a TCP connection with SSL/TLS encryption
